## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because of light transfers of photocopied, faxed or otherwise illegible content (see Applicant's enclosed drawing of Figure 10). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

2. Claims 1-3, 5, 9, 19 and 20 rejected under 35 U.S.C. 102(b) as being anticipated by U.S. patent No. 5,938,122 to Heren et al.
3. Regarding claims 1-3, Heren et al. ('122) discloses (see Figures 2,3-7) a tubular spray head (14) having a plurality of apertures (226), connected to a water source (@ 20) having a housing (12) for supporting the spray head on a surface. Regarding claim 2, 19 and 20 the showerhead included a transmission (56) where water actuates the transmission, and the transmission rotates the spray head through an arcuate path. Regarding claim 3, the spray head is aligned with an opening (238) in the housing to allow beams of water to traverse through. Regarding claim 5, the transmission is housed in a valve (flow control device 32), connected between the spray head and the water source. Regarding claim 9, Heren et al. discloses a first gear (80), and a plurality of second gears (90), where water rotates the first gear, and the rotation of the first gear rotates the second gears.

#### ***Allowable Subject Matter***

4. Claims 4, 6-8, 10-18, and 21 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure is as follows:

U.S. Patent No. 5,625,458 to Kuo, disclosing a spray tube assembly
